

EYE SPECIALTY GROUP

Your Vision Partner

At Eye Specialty Group our LASIK facility is state-of-the-art, where our patients comfort and convenience is top priority.

iLASIK

For over 50 years, Eye Specialty Group has provided state-of-the-art medical and surgical eye care to the Mid-South. From LASIK, cataract and retina surgery to cornea transplants, oculoplastics and treating diseases of the eye, our experts and staff provide the best possible care to the patients we serve. Eye Specialty Group strives to provide patients with powerful options for comprehensive primary and specialty eye care!

iLASIK is an all-laser vision correction procedure that has been the trusted choice for over 15 million treatments by physicians around the world. At Eye Specialty Group, we use bladeless, cool beam laser technology to map your entire visual pathway and correct vision using your 100% personalized eye map. We trust iLASIK because it is FDA approved to correct a broad range of vision imperfections. Approximately 95% of patients are corrected to 20/20 vision or better. iLASIK offers patients the opportunity to live a hassle-free lifestyle.

iLASIK In Three Easy Steps

1

CREATING YOUR NEW EYE MAP

Create a 3-D map of the imperfections of your eye using wavefront eye mapping technology. This is 25x more precise than conventional measurements, it even measures and corrects errors that are not detected by conventional technology.

2

PREPARING YOUR EYE

The procedure uses an ultra-fast laser for creating the thin flap to prepare the cornea for treatment.

3

DELIVERING YOUR PERSONALIZED TREATMENT

Next, an ultra-precise cool beam laser is used to gently reshape the cornea to the desired curvature, based on the digital information from your personalized eye map.
